**Survey: Nearly Half of Federal Agencies Not Confident They Can Meet Looming Deadlines for Improving Records Management Practices**

*Agencies call for more guidance, improved training, and dedicated funding*

**Alexandria, Va., Dec. 16, 2013** – Days away from a key deadline to digitize and streamline their records management practices, almost half (46 percent) of Federal agency records and information management professionals do not believe, or are unsure if, the requirements are realistic and obtainable. That’s the core finding of a new report titled “Federal Records and Information Management: Ready to Rumble?” from [MeriTalk](#), a public-private partnership focused on improving the outcomes of government IT.

The study, underwritten by storage and information management company [Iron Mountain® Incorporated](#) (NYSE: IRM), showed that three out of four Federal agency records and information management professionals believe the [Presidential Directive on Managing Government Records](#) will achieve its mission of enabling modern, high quality records and information management. However, Federal records and information management professionals indicate that better-trained records management personnel (53 percent) and dedicated funding (51 percent) would most help them to meet the Presidential Directive deadlines.

Issued in August 2012, the Presidential Directive aims to transform Federal records management by requiring agencies to transition to electronic recordkeeping for all permanent records by 2019 and comply with various statutes and regulations. While 55 percent of the survey respondents believe the Directive will improve compliance with Federal records management statutes and regulations, this optimism is tempered by agency skepticism that they will be able to comply with the approaching Dec. 31 deadline, requiring agencies to identify all permanent records

in existence for more than 30 years, as well as report on progress toward managing those records in electronic format:

- Just over half (54 percent) of records and information managers say they will be able to identify all permanent records by Dec. 31
- Seventy percent of respondents say they have very little progress to report in regards to electronically managing permanent records and email, while just 18 percent say they have made significant progress and are ready to report today
- Ninety-two percent of respondents believe their agency must take further steps to meet the Directive requirements

Survey respondents believe that successful compliance with the Directive will deliver additional benefits, including improving accessibility in records search (50 percent); increasing the overall efficiency of agency operations (45 percent); making search, eDiscovery, and Freedom of Information Act response practices easier (38 percent); increasing government transparency (33 percent); and decreasing the cost of records and information management (33 percent).

“The Presidential Directive – in combination with Sequestration, the ‘Freeze the Footprint’ mandate, FOIA, Open Government, and other information-centric actions like the [Open Data Policy](#) – have Federal agencies at an information management tipping point,” said Megan Kriebel, general manager, Government Services, Iron Mountain. “Agencies are trying to balance ever-expanding record volumes with flat or shrinking budgets, all while racing to meet mandates that require a fundamental shift in how they store, access, and manage records and information. Agencies can more easily meet the Directive deadlines and find cost savings by carefully reviewing records management practices, engaging agency leaders, and working with industry partners.”

“Federal Records and Information Management: Ready to Rumble?” is based on an online survey of 100 Federal government records and information management professionals in October 2013, asking respondents to assess their agency’s likelihood of meeting the Presidential Directive deadlines. The call for more training and budget closely mirrors findings from two previous surveys, a March 2013 MeriTalk/Iron Mountain report, “[Federal Records Management: Navigating the Storm](#)”, and a [survey](#) Iron Mountain conducted in advance of the adoption of the Presidential Directive in July 2012.

This report has a margin of error of +/- 9.55% at a 95% confidence level. To download the full study, please visit [www.meritalk.com/readytorange](http://www.meritalk.com/readytorange).
